

Shady Clay

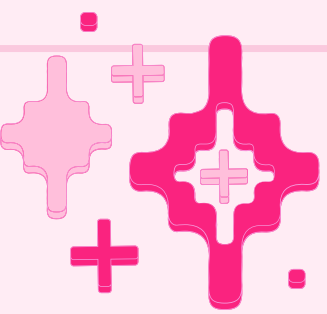

Game update
by Maloney, Negar and Mollika

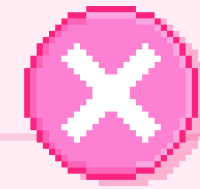

GAME PREMISE

- Two students are rivals in an art class, competing for the best grade on their sculpture project.
- One of them (the player) has no intention of playing fair! You're determined to modify the sculpture's design to ruin your rival's project.
- The problem? Your rival occasionally checks to ensure everything is on track. Pull off the sabotage without getting caught to win!

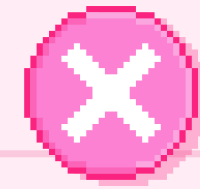

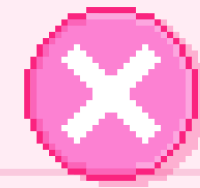

Mechanics of the game

Complete the sabotage while the rival is distracted by clicking and holding the mouse.

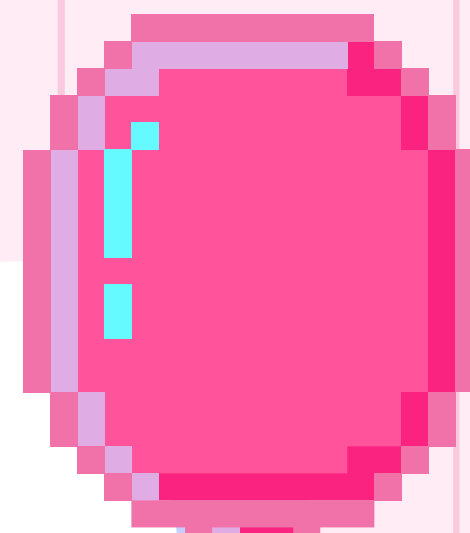

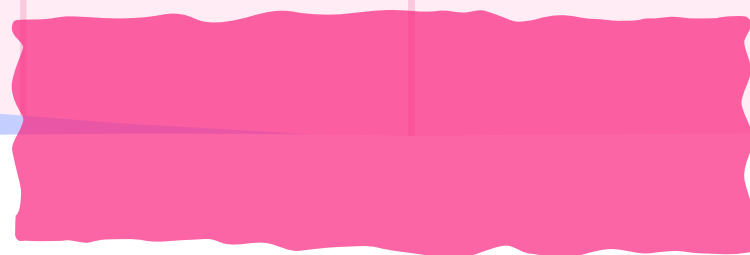

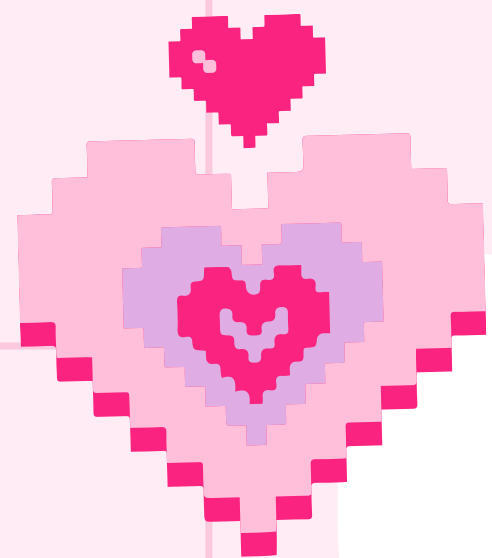

Fill the progress bar to win. When no action is taken, it drains to add pressure on the player.

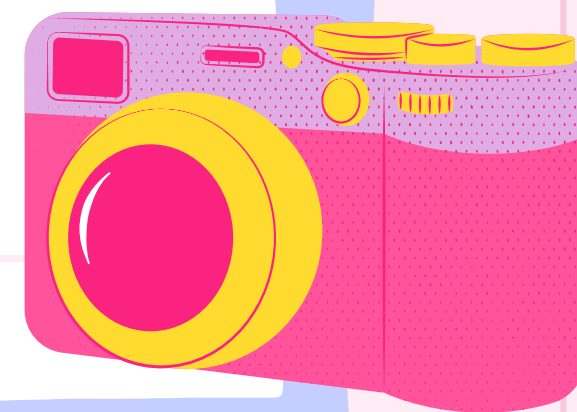

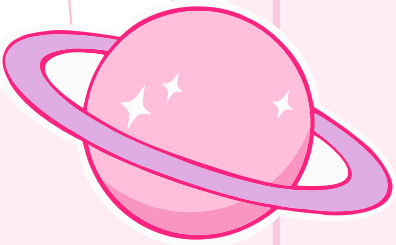

You get a game over if you are caught by your rival or the timer runs out!

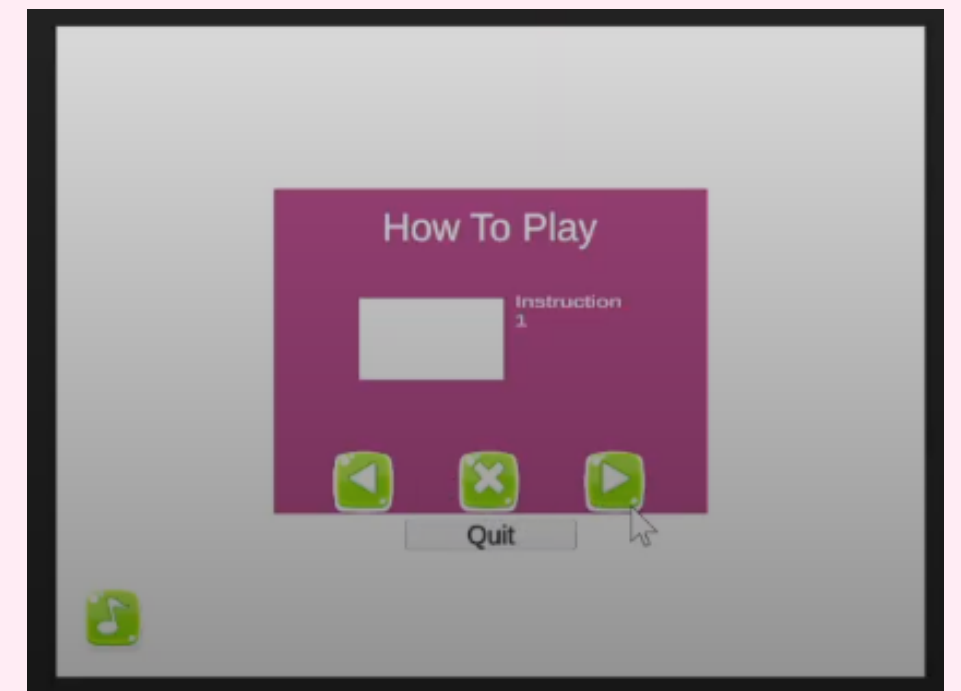

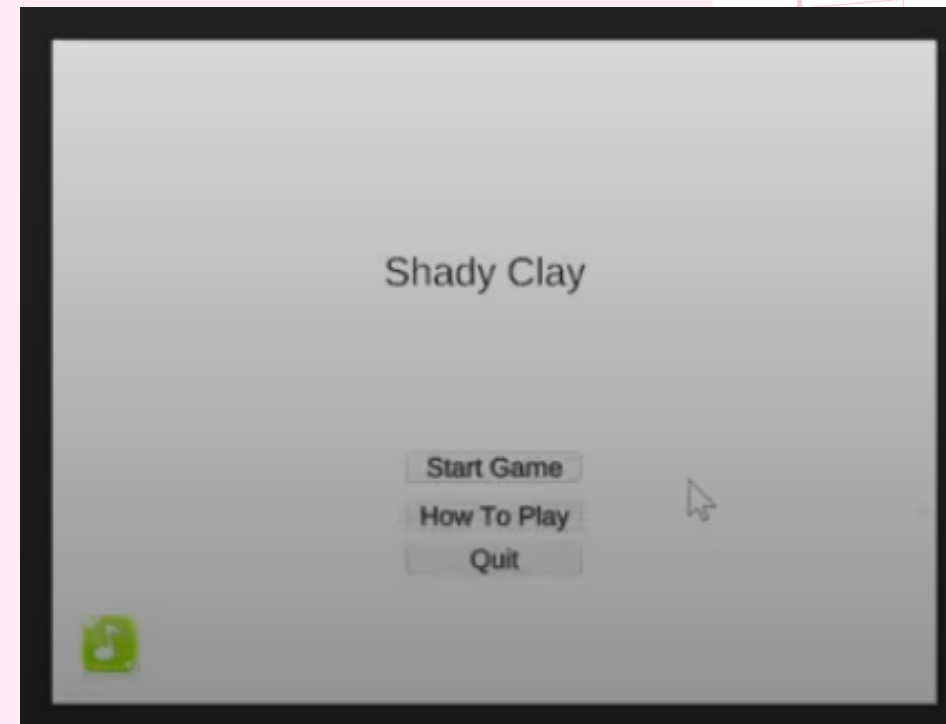

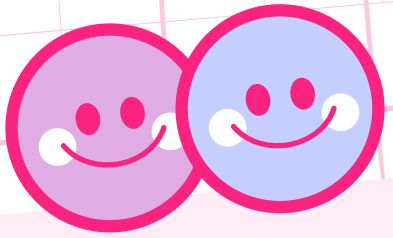

What is done so
far

UNITY

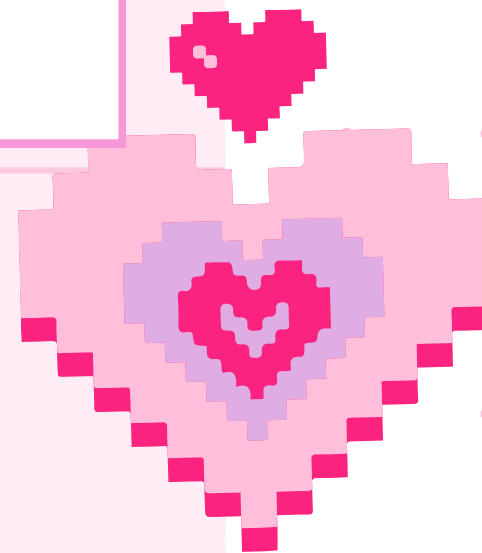

- Basic UI created (home screen, how to play pop-up, game interface)
- Clicking and holding the mouse down fills the progress bar
- When the mouse is released, the progress bar slowly drains
- Created a timer

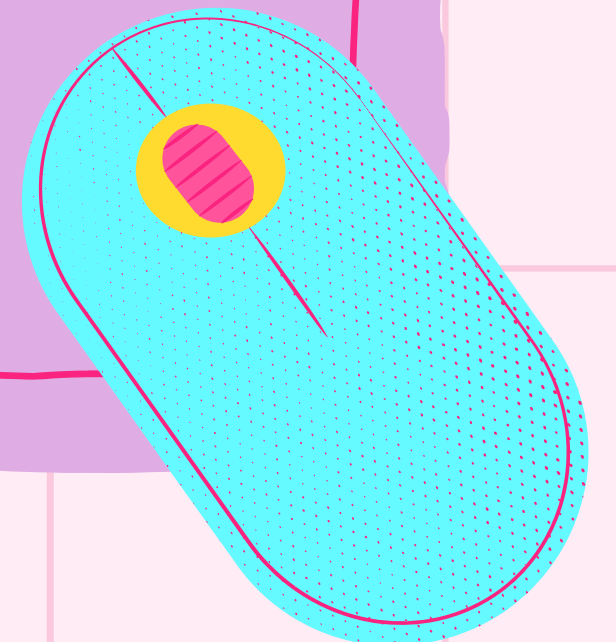

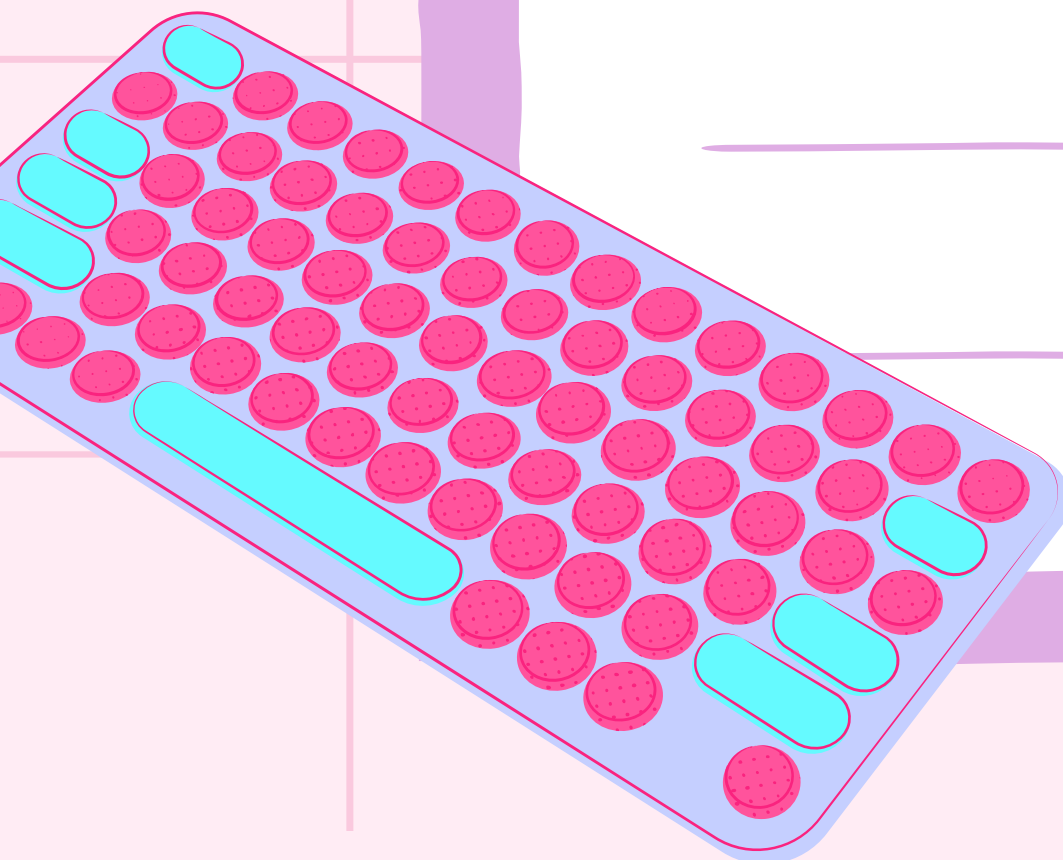

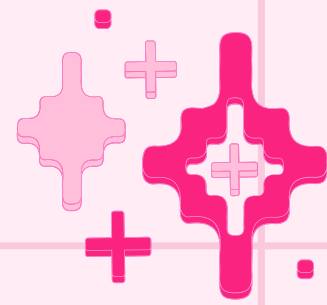

ART ASSETS WIP

- Character design (completed)
- Background art (completed)
- Sprite of the player character waiting + animation (in progress)
- Sprite of the rival character on her phone (not started)

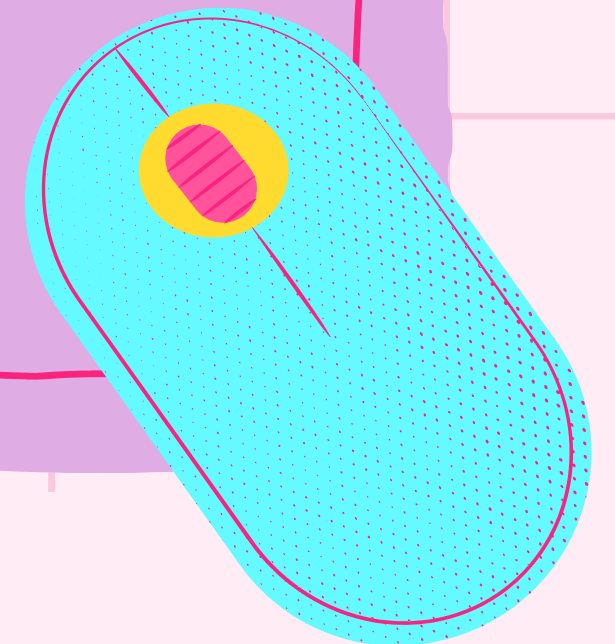

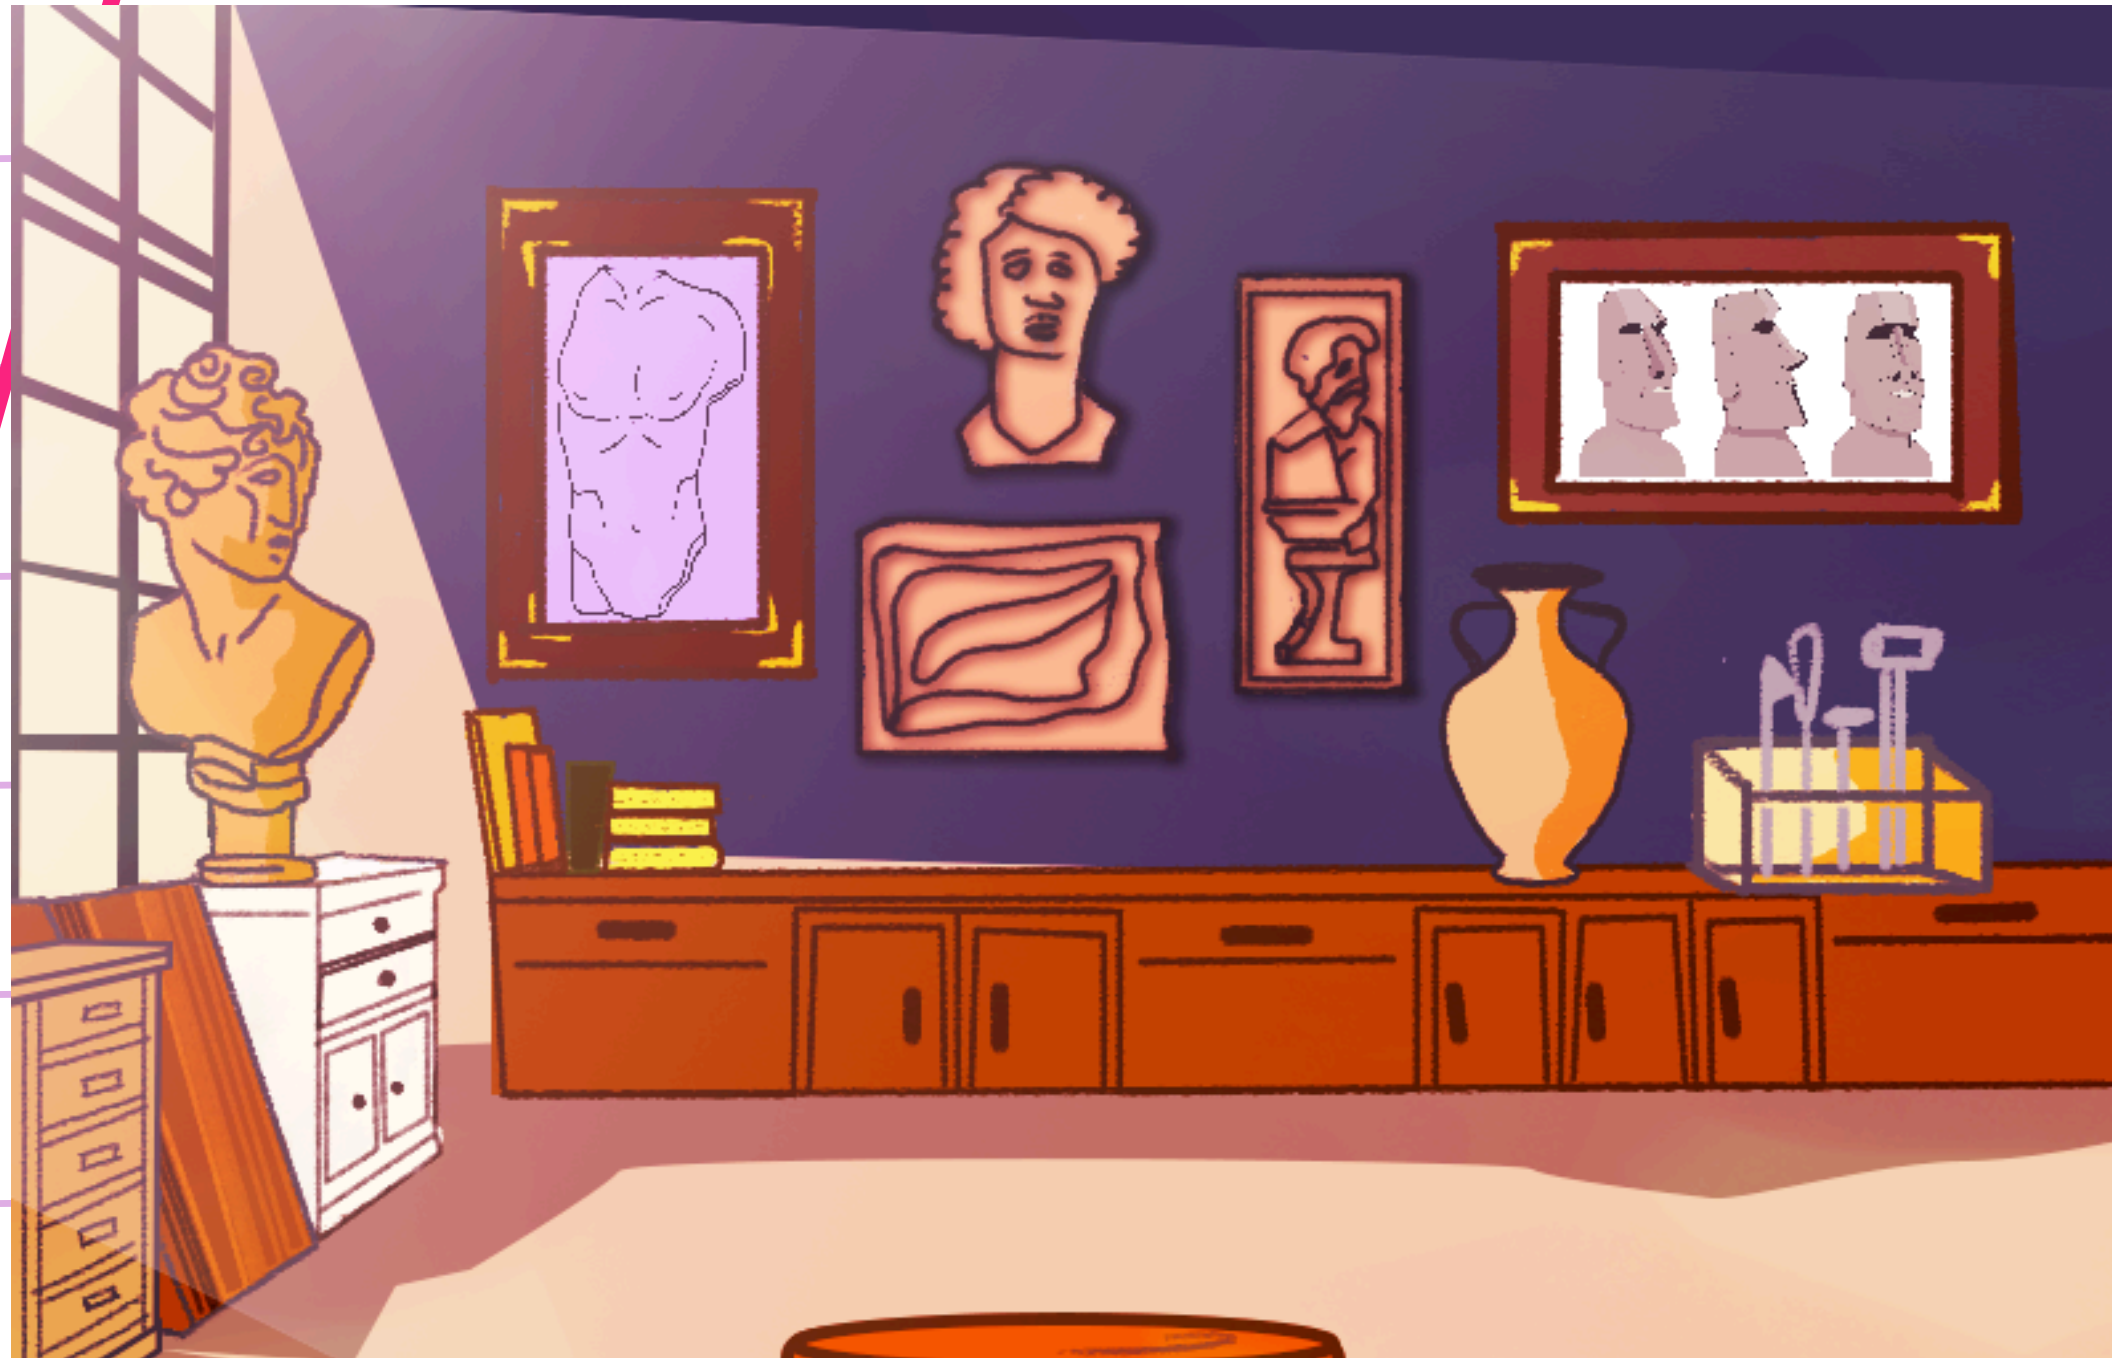

Character Design

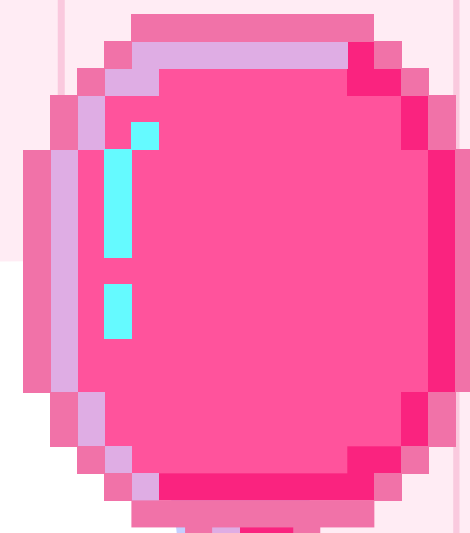

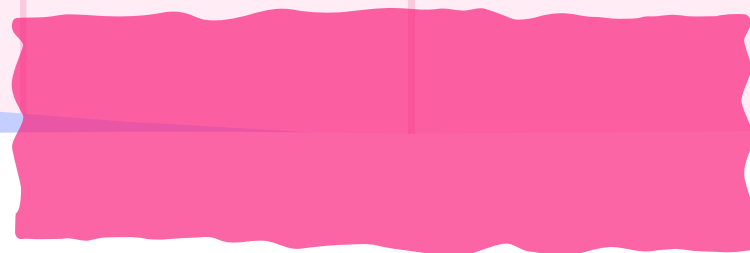

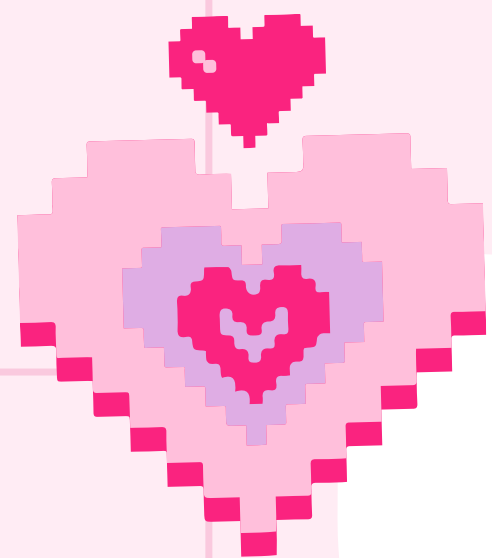

Background Design

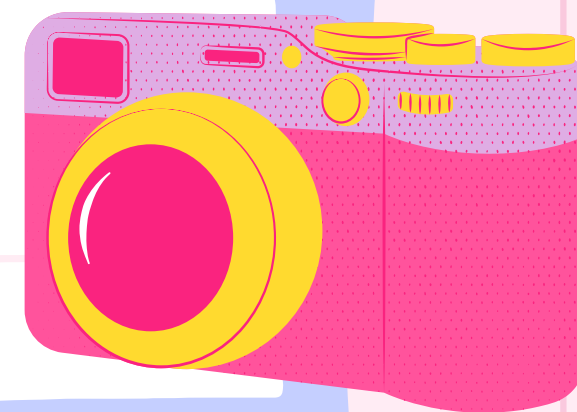

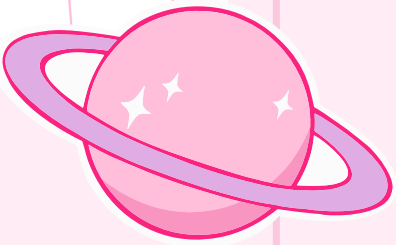

Animations

What is left to
do

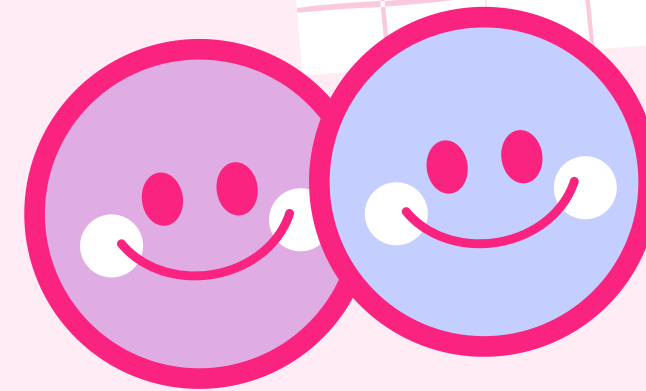

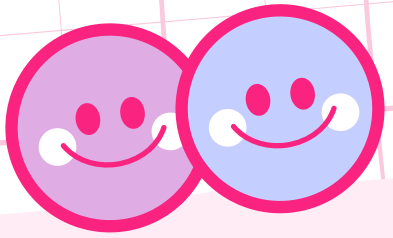

UNITY

(From high to low priority)

- Implement the player animation and make it responsive
- Implement the rival animation and make it randomized
- Set the win and lose conditions
 - Player loses if either
 - timer runs out
 - they get caught
 - Player wins if
 - progress bar fills up
- Add sound to the UI elements
- Add a music score

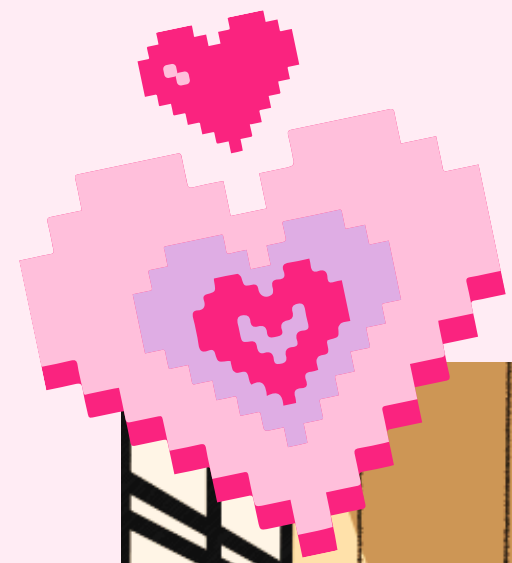

ART

(From high to low priority)

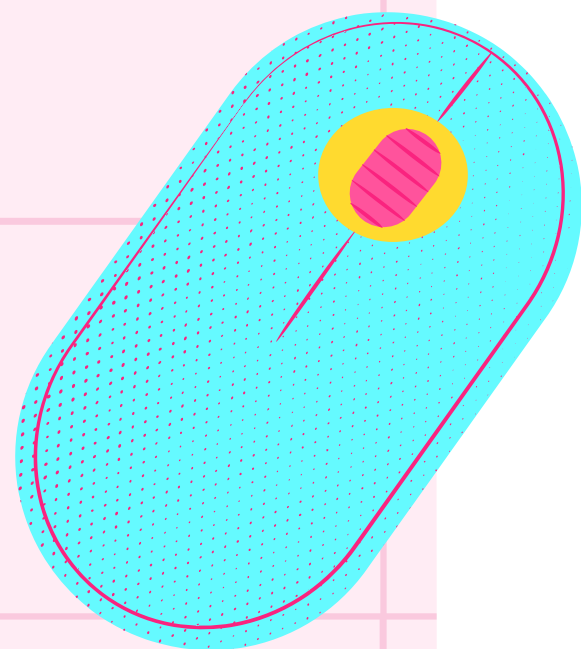

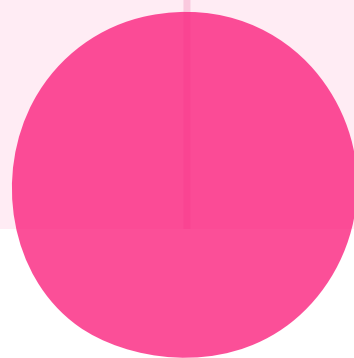

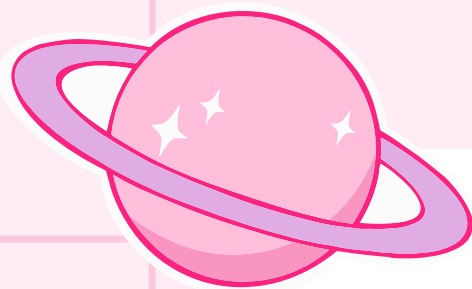

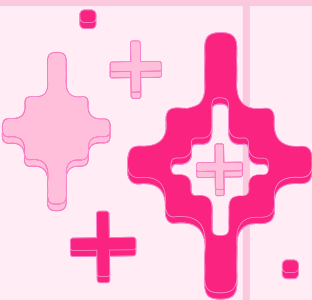

- 2 animations for each character
- Title logo
- 1 beautiful and 1 ugly sculpture
- Win and lose backgrounds
- Button UI

Iterative Process

THANK YOU
